#### **DETAILED ACTION**

# Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 6 and 8 rejected under 35 U.S.C. 102(b) as being anticipated by Andersson (WO 01/34454 A1).

In re claim 6, Andersson discloses a semi trailer coupling as shown in Figure 1 comprising a coupling plate (4) and a bearing block for movable fastening of the coupling plate to a frame (2) of a tractor, the bearing block includes a bearing region (10) and a fastening region (8), the bearing region includes bearing means for pivotable bearing of the coupling plate about axis (y) and the fastening region includes fastening means for detachable fastening of the coupling plate to the frame of the tractor, wherein the bearing region has a larger cross section than that the fastening region (as shown in Figure 4), when the bearing block is screwed on section in the direction of travel and parallel to pivoting axis.

In re claim 8, Andersson discloses the semi trailer coupling as claimed in claim 6, wherein the bearing block is formed from a one-piece casting as shown in Figure 3.

# Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/538,541 Page 3

Art Unit: 3611

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 7, 9-12 rejected under 35 U.S.C. 103(a) as being unpatentable over Andersson as applied to claim 6 above, and further in view of Alguera Gallego (US Patent 6,623,024).

In re claim 7, Andersson discloses the semi trailer coupling as claimed in claim 6, but does not disclose that the bearing region of the bearing block defines with the coupling plate on a clearance for relative movements of the coupling plate and the bearing block. Alguera Gallego, however, does disclose that the bearing region of the bearing block (5) defines with the coupling plate (1a) on a clearance for relative movements of the coupling plate and the bearing block in a direction perpendicular to the direction of travel and in the direction of the pivoting axis as shown in Figure 7. At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the invention of Andersson to have the fastening region of Alguera Gallego since the two fastening regions would perform equally well at securing the coupling plate to a trailer frame and is thus a mere substitution of one fastening region for another.

In re claims 9 and 10, the combination of Andersson and Alguera Gallego disclose the semi trailer coupling as claimed above in claims 6 and 7. Alguera Gallego also discloses that the bearing block has a width in the direction of the pivoting axis in the bearing region which is smaller than the width of a receiving region on the coupling plate for receiving the bearing block as shown in Figure 7.

In re claims 11 and 12, the combination of Andersson and Alguera Gallego disclose the semi trailer coupling as claimed above in claims 9 and 10. Andersson further discloses that the width of the bearing region is roughly 2.5 times the width of the fastening region of the bearing block as shown Figure 4. It has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233. Therefore, it would have been obvious to one of ordinary skill to have chosen the appropriate width based upon the desired results.

#### Response to Arguments

1. Applicant's arguments filed 4/30/2008 have been fully considered but they are not persuasive. Applicant argues that the prior art does not teach a clearance to compensate for movement in the direction of the pivoting axis. However, the examiner maintains that the rejection is proper as discussed above. Gallego teaches a clearance as shown in Figure 7 between elements 1a and 17, which creates a gap for movement in the pivoting axis as discussed above with regards to claim 7.

### Conclusion

2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Stabley whose telephone number is 571-270-3249. The examiner can normally be reached on M-F 7:30-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lesley D. Morris can be reached on 571-272-6651. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
